

1. Define the following terms
 - a. Data encryption
 - b. Callbacks
 - c. Promises
 - d. Authentication
2. Differentiate between data encryption and data decryption
3. Discuss the three techniques used in data encryption
4. Write down steps you can follow to implement basic data encryption using Node.js and the **crypto** module.
5. Given the following third party library indicate their function and how you can install them and use them in your project.
 - a. Moment()
 - b. Lodash()
 - c. Express
 - d. Axios
6. Give any three libraries that you can use to perform user authentication.
7. Give and discuss any three best practice to consider when implementing authentication in Node.js applications.
8. Define the following.
 - a. Class
 - b. Object
 - c. Method
9. Describe the following node.js key concepts.
 - a. Node.js
 - b. Backend Application
 - c. Dependencies
 - d. Postman
 - e. Express.js
10. Give the purpose of APIs in web development?
11. Give the prerequisite to establish of database connection.
12. Give any Application of client libraries you know.
13. How you can install one of the following
 - i. Axios
 - ii. Express Js
 - iii. Nodemon
14. Write the steps you can follow to configure the MYSQL SERVER.
15. Write a command used to create a project directory and navigate to that project

16. Suppose you have a java script file called **app.js** write the command you can use to run this on the node server.
17. Give the prerequisites o develop RESTFUL APIS.
18. Which library you will need to establish the database connection and write its command.
19. Write all steps you can follow to install node.js in your computer then check the version on node and npm.
20. Write all the steps you can follow to establish the database connection with node js

21. Answer the following question

How you can create a new database using a sql query with node.js application.

How you can set up schema or create tables with the database.

22. Explain the following command used to develop RESTFUL APIs:
 - i. POST/items:
 - ii. GET/items/:
 - iii. GET/items/:id:
 - iv. PUT/items/:id:
 - v. DELETE/items/:id:
